**NEW RELEASE:  
Jumbo (JMB) Series!**

*"Best Electric Fence Fault Finder of 2019"*

**Read more on Page 4!**

## Editor's Note - By Danielle Garside

2019... We did it! This year, Pakton released the world's largest DC powered IP Electric Fence Energiser. Our engineering and production teams have worked so hard to produce this innovative, high quality product! At 46J stored it is nearly twice the power of anything we have done before.

This year, we have welcomed two new cadets to the engineering team, Jared and Kyile, along with Cecilia and Tiarne to our sales team. Unfortunately, we have also said heartfelt goodbyes to two of our valued engineers, Ed and Miles. We are confident that they will achieve greatness in this new chapter of their lives, and wish them all the best.

Paul and Kayleen have visited a few of Pakton's

international customers this year, and hosted a few as they take a break in the Australian sunshine. It has been rewarding to see how our products are being used on an international scale, and the resulting photos have been stunning!

As Christmas approaches, we wish to advise you that that our office will be closed from the 20th December 2019 until January 6th 2020.

2020 will mark Pakton's 25th Anniversary as a company, and we look forward to sharing our upcoming releases with you very soon! Wherever you are, whatever you are doing, we hope you have a wonderful break, and look forward to hearing from you in the new year!

## Pakton Releases World's Largest IP Energiser - Jumbo (JMB) Series

On the 31st July 2019, Pakton Group proudly announced the release of the Jumbo (JMB) Electric Fence Energiser series at a Sheep Technology Field Day in Goondiwindi, QLD. Consisting of three models, each producing a stunning 46J of stored energy, the JMB series is the most powerful and feature-rich range of electric fence energisers Pakton has released to date, taking the lead as the world's largest IP Energiser(R)!

While the JMB was specifically designed for boundary and exclusion fencing, the series is also well suited to any large permanent electric fencing application. At time of publication, the JMB range will only be available to Australian customers in conjunction with the Solar Electric Fence Station (PTE2500).

Some defining features of the Jumbo include:

- Industrial cabinet,
- 12V DC powered,
- Virtual Keypad,
- Power or Loop Monitoring,
- Distant Fault Detection (DFD TM),
- Inbuilt Ground (Earth) monitor and

# JMB32

## Jumbo Energizer

Primarily designed to utilise a world leading electric fence monitoring technology, the JMB uses our Patented, Distant Fault Detection (DFD™) technology to determine if there is a fault on very long fences.

The JMB Series by JVA also introduces the Virtual Keypad. The Virtual Keypad eliminates the need to purchase a JVA Keypad and allows the installer/user to use their Wi-Fi enabled device (Phone/Laptop).

The Virtual Keypad is a user interface that connects to your JMB energizer and allows you to control, monitor and program the energizer. The JMB's can also be used with JVA Keypad if required.

Each JMB unit produces up to 46 Joules (stored) and is designed and manufactured in Australia.

# "Best Electric Fence Fault Finder and Tester of 2019"

Over the years, Pakton's Electric Fence Fault Finders (also known as Power Probes) have been evaluated by multiple organisations and bloggers. We appreciate the feedback this provides, and use these evaluations to ensure our product is the best it can be for our customers. This year, Gale's Westlake evaluated a wide variety of branded Fault Finders for their blog, and we are proud to announce Pakton came out on top!

Here is some of the feedback we received:

"...the clear indicator lighting that shows the short current is impressive. Some testers that you find just display the current and short voltage on the screen which can be hard to read, however, his model has a lit screen and colored indicators which show the direction of the fault clearly. It's a very effective tester that isn't too big or small, fitting in most hand sizes comfortably."

**We are very pleased to see our products flourishing on an international scale, and hope to share similar news again with you next year!**

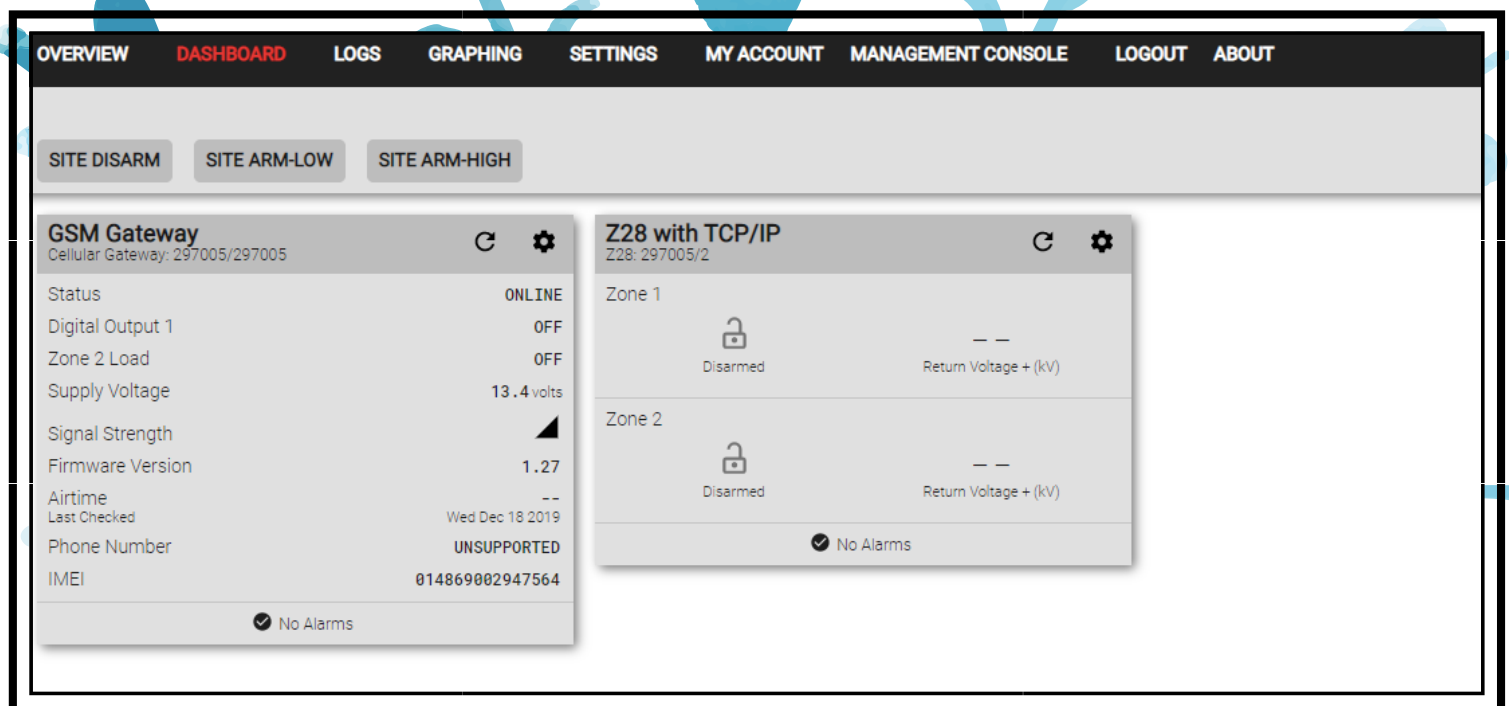

# Cloud Router version 2

## New Release!

Version 2 of the industry's most dynamic monitoring system was released this month. Along with recent cosmetic updates, Cloud Router is now more collaborative than ever with the introduction of the **Family Feature**.

Lack of communication between monitoring accounts can cause issues with users and their counterparts. The Cloud Router Family Feature solves this issue by allowing site owners to add up to three family members who may piggy-back onto their account- giving them the ability to add, change or simply monitor the owner's site at no cost at all!

# A blast from the past...

A big thank you to Mr Alexander for sending us these photos. The Paul Thompson Electronics Electric Fence Multi-Meter was one of the first prototypes of Pakton's Electric Fence Power Probe, and the product that created the Pakton brand.

We are pleased to hear that Mr Alexanders Multi-Meter, which was manufactured in 1994, is still in perfect working order. We hope it continues to treat you well for many years to come!

## Team Dougall Sponsorship Update

Words by Trudy Dougall

The latest equestrian season has ended for Team Dougall! Unfortunately, earlier this year "My Locky" injured himself in a paddock accident and would require four months of rehabilitation work before he could partake in another event. This was extremely disappointing for Brooke as it was her final year as a junior and she had made big plans for the season. However, this misfortune gave Brooke an opportunity for Brooke to focus on "Chester" and hopefully get him to his first two-star event at the end of the season.

There were times when "Chester" seriously challenged Brooke and then there were times when he was a little superstar. The QLD International 3DE saw them complete their first one-star long format together. One of only six combinations to go, clear and under time they placed a respectable 16th out of 50 starters and earned themselves the necessary qualification to move up to two-star!

Fig Tree Pocket was the first event "My Locky" competed in after his accident, and he did not disappoint! The next event we took him to Toowoomba International Event to test things a little more. Leading after the dressage, a clear showjumping round kept them in the lead. Cross-country day was exciting and they galloped around the course, jumping like a pro they came in with only a couple of time faults. Finishing in second, we could not have been happier.

We made the decision to step both horses up to the next level at the last event for the season. "My Locky" competed in the three-star class and "Chester" stepped up to two-star at the recent Tambourine Equestrian CNC event. "My Locky" jumped a lovely clear cross country round to finish in 5th place. Chester, however, was a superstar! The two-star course had quite a few fences the little fellow had not had to face up to before. He did not disappoint, finishing his season with a beautiful clear round and almost on time. The smile on Brooke's face said it all, and it is the reason we keep going even when things get tough and do not always go to plan.
